

SMARTRETAIL CHAIN DASHBOARD

Data source:	DUA Edu — SmartRetail Chain Dashboard (Power BI Service)
Scope:	4 dashboard pages: Executive Overview, Sales Performance, Product Analysis, Operations & Service
Report date:	September 19, 2026

1. Context & Scope of Analysis

The dashboard is currently filtered to Year 2026 – Month 6 vs. Last Period figure across the 4 pages reflecting the change versus May 2026 (month-over-month, MoM), not a year-over-year comparison. The January to June 2026 trend charts are used to assess whether the June movement is a one-off shock or an emerging trend. Four core financial metrics for June 2026 (Executive Overview page):

2. Business Insights & Recommended Actions

The 6 insights below were derived by cross, referencing data across all 4 dashboard pages, applying the What - So What - Now What framework.

Insight 1 (Overview): Revenue down for 4 consecutive months, profit margin holds steady

In June 2026, our revenue came in at €247.68K, which is an 18.7% drop compared to €304.70K in May. This makes it four straight months of falling revenue, and the downward trend is speeding up. We saw a 1.5% dip in March, 7.4% in April, 9.9% in May, and now 18.7% in June. On the bright side, our net profit margin has stayed very stable at around 18% for six months in a row. For instance, June brought in €45.22K in net profit, which works out to 18.3% of our total revenue.

This is not just a random drop for a single month. We are looking at a downward trend that is speeding up and needs our immediate attention. But because our profit margin has stayed stable, the main issue is probably related to market demand or our sales operations, not our cost structure.

We need to set up an early warning system if revenue drops for two or more months in a row. Instead of just cutting costs, we should focus on finding out what is affecting demand, like seasonal changes, what our competitors are doing, or how well our marketing is working. At the same time, we should keep our current flexible cost structure because it is doing a great job of protecting our profit margins.

SMARTRETAIL CHAIN DASHBOARD

Insight 2 (Sales Performance): Orders are being lost faster than revenue, and the average basket is getting bigger

In June, our order count dropped by 23.67 percent, falling from 207 orders in May down to 158. Interestingly, this decline in volume is actually outpacing our revenue loss. Meanwhile, the Average Order Value took a positive turn, growing by 6.49 percent from €1.47K to €1.57K.

Consequently, our revenue slump is driven primarily by a lower frequency of transactions rather than smaller purchase amounts. It appears that casual shoppers who spend less are slipping away, whereas our premium customers continue to buy from us confidently.

To tackle this, launching a fresh incentive program will be crucial for encouraging repeat purchases. This could involve targeted vouchers or specific campaigns aimed at users who have been inactive for over a month. Furthermore, conducting a deep dive into our customer data will help us pinpoint exactly which buyer segments are dropping off.

SMARTRETAIL CHAIN DASHBOARD

Insight 3 (Sales Performance): Berlin Mitte is an operational hotspot, not a demand problem

Revenue at the Berlin Mitte store dropped by 23.7 percent, which is worse than the 18.7 percent average drop across the whole chain. Looking closer at this location, their Website sales plummeted by 65.9 percent and Offline Store sales fell by 48.1 percent, even though their Amazon sales actually grew by 14.9 percent. On top of that, Berlin Mitte currently has the lowest average customer rating out of all our locations at 2.59, and they only manage to successfully complete 33.3 percent of their Amazon orders.

This tells us we are dealing with an operational problem limited to this specific location rather than a general drop in customer demand. The poor performance could be tied to website technical issues, a lack of inventory at the physical store, or bad customer service that is directly leading to those low ratings and unfulfilled orders.

We need to make it a top priority to run an operational audit at Berlin Mitte. We should immediately verify their website stability and physical inventory levels, examine their daily

customer service procedures, and find out exactly why so many Amazon orders are failing to complete.

StoreName	SalesChannel	Previous Period Revenue	Revenue	% Total Revenue	% Revenue Variance vs. Pre Period
Total		€ 304,701.51	€ 247,677.02	100.00%	▼ 18.7%
Berlin Mitte	Total	€ 64,521.80	€ 49,260.11	19.89%	▼ 23.1%
	Amazon	€ 15,444.59	€ 17,750.90	7.17%	▲ 14.9%
	Ebay	€ 10,938.72	€ 10,729.34	4.33%	▼ 1.9%
	Offline Store	€ 15,250.95	€ 7,914.08	3.20%	▼ 48.1%
	Otto	€ 9,675.95	€ 8,366.47	3.38%	▼ 13.5%
	Website	€ 13,211.59	€ 4,499.32	1.82%	▼ 65.9%

Insight 4 (Product Analysis): Heavy reliance on Apple/MacBook, while iPhone is growing

In June, Apple generated 62.08 percent of our total revenue. However, sales for this brand dropped by 25.0 percent, which is much worse than the 18.7 percent decline seen across the whole company. The main reason for this is the MacBook Air M3. Despite being our most popular item for two periods in a row, its revenue fell sharply by 44.0 percent, going from €100.0K down to €56.0K. Fortunately, iPhone 15 sales provided a bright spot by growing 6.3 percent, moving from €51.9K to €55.2K.

This situation clearly highlights that we rely too heavily on a single brand and one specific item. Being a top seller does not guarantee steady growth. Consequently, as interest in the MacBook fades, it is dragging our entire revenue down with it.

Going forward, expanding our main product range will be essential. Specifically, shifting more attention to the growing smartphone category is a very smart move. Alongside this, investigating the sudden drop in MacBook Air M3 sales is critical. Finding out whether this is due to pricing, competitor actions, a new model release, or simply stock shortages will allow us to react quickly.

Insight 5 (Operations): Completed Order Rate drops sharply in June

In June, the percentage of completed orders dropped by 10.2 percent, falling from 79.62 percent in May down to 71.49 percent. This is quite surprising because this metric had remained very stable between 78 and 80 percent over the previous five months. At the same time, our average customer rating actually improved by 8.5 percent to reach a score of 3.15.

This indicates that our falling revenue is not just about customers placing fewer orders. A new operational problem is clearly preventing existing orders from being fulfilled successfully. These two factors combined are pushing our total revenue down much faster than anticipated. However, because customer ratings are still going up, poor service quality is unlikely to be the root cause of the problem.

Looking ahead, launching an immediate investigation into our warehouse and supply chain operations for June is critical. Finding out if there were missing items in stock, order processing errors, or late deliveries that caused cancellations will be the top priority. Furthermore, shifting to tracking the completed order rate on a weekly basis instead of monthly will help us spot and fix similar drops much earlier in the future.

Insight 6 (Overview): Revenue is highly concentrated in 2 regions, a risk if a local disruption occurs

Based on the regional revenue chart, just two areas generate almost 60 percent of our total sales. Specifically, Nordrhein-Westfalen brings in 32.74 percent, and Sachsen adds another 27.04 percent. Meanwhile, every other location, such as Hamburg, Bremen, and Baden-Württemberg, only contributes between 12 and 16 percent each

Relying this heavily on just two locations puts the entire business at serious risk. If any unexpected issues happen in these primary areas, like the arrival of new competitors, changes in what consumers want, or local operational problems, our overall revenue could take a massive hit.

To fix this imbalance, creating a solid market development plan for the smaller regions will be a vital next step. By boosting sales in those underperforming areas, we can lower our dependency risk. At the same time, keeping a very close eye on the performance metrics of our two core locations is essential. Doing this will allow us to react swiftly to any early warnings of a sales drop.

3. Priority Action Plan Summary

No.	Related Insight	Key Action	Priority	Suggested Timeline
1	Berlin Mitte	Audit Website/Offline operations & order-processing workflow at Berlin Mitte	High	1–2 weeks
2	Completed Order Rate	Investigate the warehouse/supply chain for June; track completion rate weekly	High	1–2 weeks
3	MacBook Air M3	Review pricing/inventory/competition for MacBook Air M3; push the Smartphone category	Medium	2–4 weeks
4	Purchase frequency	Remarketing & voucher programme to drive repeat purchases	Medium	2–4 weeks
5	Revenue trend	Set up an early-warning trigger for revenue declines $\geq$ 2 consecutive months	Medium	Next month
6	Regional concentration	Market-development plan for low-contribution regions	Low	1–2 quarters

4. Conclusion

June 2026 reveals a clear revenue drop that has been speeding up over four consecutive months. Fortunately, our net profit margin is holding steady at around 18 percent. This shows that our current struggle is tied to sales volume and operational roadblocks rather than cost efficiency.

We must prioritize immediate action on two specific operational problems, which are the Berlin Mitte store performance and the sudden fall in our completed order rate. Resolving these issues quickly will have a direct positive impact on our revenue in the short term.

At the same time, we face deeper structural risks because we rely heavily on just two regions for about 60 percent of our revenue and depend too much on Apple and the MacBook Air M3. To fix this, we need a solid plan over the medium to long term to diversify our business and reduce these dependencies.
